- Appendix B: Data Migration Plan

1. Executive Summary

Houzs Century is a Malaysian event management company specializing in branded retail exhibitions and solo mall booth events across 13 states, managing four premium brands: AKEMI, ZANOTTI, ERGOTEX, and DUNLOPILLO.

This document defines the complete architecture for a **fully standalone ERP system** that replaces Google Sheets, Google Calendar, and Notion entirely. After deployment, the team will **no longer use** these external tools. All data creation, editing, management, and calendar scheduling happens exclusively within the ERP system.

The system is administered through a single primary account: **hello@houzscentury.com**.

Key Principles

- Fully standalone: No dependency on Google Sheets, Google Calendar, or Notion after data migration
- Single editing interface: ALL data edits happen in the ERP only
- Built-in calendar: Notion-style calendar with click-to-expand event details (no color coding by organizer)
- Primary admin account: hello@houzscentury.com controls all user access and permissions
- Mobile-first PWA: Installable on mobile + desktop, image uploads via camera, remarks via typing only
- No voice input: All remarks and data entry via keyboard/typing and file uploads (image, PDF, Excel)
- Role-based access: Granular edit permissions per department and per user

2. ERP Dashboard Front Page

The ERP front page is the first screen all users see upon login. It displays the master event data table (migrated from the Google Sheets "Exhibition Report Dashboard") with interactive sort/filter capabilities.

2.1 Dashboard Data Table

The main data table displays all event records with the following columns:

Column	Data Type	Editable By
YEAR	Number	BD only
MONTH	Text	BD only
START DATE	Date	BD only
END DATE	Date	BD only
DAYS	Auto-calculated	System
ORGANIZER	Text	BD only
STATE	Select	BD only
EVENT VENUE	Text	BD only
BRAND	Select (AKEMI/ZANOTTI/ERGOTEX/DUNLO PILLO)	BD only
EVENT TYPE	Select (SOLO/EXHIBITION)	BD only
SIZE (SQM)	Number	BD only
SALES (RM)	Currency	BD only
COGS (RM)	Currency	BD only
GP (RM)	Auto-calculated	System
GP%	Auto-calculated	System
RENTAL (RM)	Currency	BD only
RENTAL%	Auto-calculated	System
SETUP COST (RM)	Currency	BD only
NET PROFIT (RM)	Auto-calculated	System
RENTAL/SQM	Auto-calculated	System
RENTAL/DAY	Auto-calculated	System

2.2 Quick-Sort Filter Bar

A sticky filter bar at the top of the dashboard with dropdown/button filters:

Filter	Type	Options
Year	Dropdown	All years available in database
Month	Dropdown	January - December
Date Range	Date Picker	FROM date - TO date
Organizer	Searchable Dropdown	All organizers (auto-complete)
Brand	Toggle Buttons	AKEMI, ZANOTTI, ERGOTEX, DUNLOPILLO
Venue	Searchable Dropdown	All venues (grouped by state)
Event Type	Toggle Buttons	SOLO, EXHIBITION

- Record count display: "Showing X record(s)"
- Clear all filters button
- Sort by any column header (ascending/descending)
- Financial columns hidden for non-BD/Management roles
- Inline editing: BD can click any cell to edit directly in the table
- "+ Add Event" button: Opens new event form (BD only)

3. Built-In Calendar System

The ERP includes its own built-in calendar that replaces Google Calendar entirely. The calendar design follows the Notion calendar style: a clean monthly grid where clicking on a date reveals all event information.

3.1 Calendar Design (Notion-Style)

- Monthly grid view as the primary view (similar to Notion calendar database view)
- Each date cell shows event count and brief event names
- Click on a date to expand and see ALL events on that date
- No color coding by organizer - clean, uniform appearance
- Events shown as simple cards/chips within each date cell
- Weekly and Daily view available as secondary options

3.2 Event Card (Click to Expand)

When a user clicks on a date, an expanded panel shows all events for that date. Each event card displays:

Field	Source	Always Visible
Event Name	STATE - Brand - EVENT TYPE - VENUE	Yes
Date Range	START DATE to END DATE	Yes
Days	Auto-calculated duration	Yes
Organizer	From event record	Yes
State	From event record	Yes
Brand	AKEMI / ZANOTTI / ERGOTEX / DUNLOPILLO	Yes
Event Type	SOLO / EXHIBITION	Yes
Booth Info	Booth number and size (SQM)	Yes
Status	Confirmed / Pending / Cancelled / Completed	Yes
Sales PIC	Assigned sales person	Yes
BD PIC	Assigned BD person	BD/Management only
Setup Driver	Assigned driver	Operation/Driver only
Setup-Dismantle Date	Exact date and time	Operation/Driver only
Financial Summary	Sales, COGS, GP, Rental	BD/Management only
Preparation Condition	Done Prepared / Pending	Yes
Setup & Dismantle Condition	Done Dismantle / In Progress	Yes

3.3 Calendar Actions

- Click event card to open full event detail page (with all toggles, uploads, remarks)
- "+ Add Event" button on any date (BD only)
- Drag-and-drop to reschedule events (BD only)
- Filter bar from dashboard applies to calendar view too
- Toggle between Dashboard Table View and Calendar View with one click

3.4 Calendar Access by Role

Role	View	Can Add/Edit Events
BD (hello@houzscenury.com)	All events with full details	Yes - full CRUD
Management (Wei Siang)	All events with financial data	No - view only
Sales Leader	Only their assigned events	No - view only
Operation Teams	All events (no financial data)	No - view only
Driver	Only assigned events (minimal)	No - view only

4. Standalone Architecture

After v2.0 deployment and data migration, the ERP system operates independently. Google Sheets, Google Calendar, and Notion are no longer used for day-to-day operations.

4.1 Before vs After

Task	Before (Old Way)	After (ERP v2.0)
Edit event data	Open Google Sheets, find row, edit	Edit inline in ERP dashboard
Create new event	Add row in Sheets + Calendar + Notion	One form in ERP creates everything
View calendar	Open Google Calendar separately	Built-in Notion-style calendar
Update BD workflow	Open Notion, click status buttons	Click buttons in ERP portal
Upload images	Open Notion, find toggle, upload	Upload in ERP via camera/file picker
Add remarks	Open Notion, type in toggle	Type in ERP remark field
Check schedule	Open Notion Logistics page	View in ERP Operation portal
Download permit	Open Notion, find file, download	One-tap download in ERP
View financials	Open Google Sheets Dashboard tab	ERP dashboard with filters
Manage users	Share Notion/Sheets manually	Admin panel in ERP

4.2 What Gets Retired

Tool	Status After Migration	Data
Google Sheets	RETIRED - no longer edited	All data migrated to ERP database
Google Calendar	RETIRED - no longer used	Replaced by built-in ERP calendar
Notion	RETIRED - no longer edited	All pages/databases migrated to ERP

Historical data from Google Sheets (1,084+ rows), all Google Calendar events, and all Notion databases will be imported during the migration phase.

4.3 Primary Admin Account

Primary Account: hello@houzscency.com

- This is the ONLY admin account for the entire ERP system
- Controls all user creation, role assignment, and permission management
- Has full CRUD access to every module and every record
- Can grant or revoke edit permissions for any user
- Receives system alerts, audit logs, and sync status reports
- Can export all data to CSV/Excel for external reporting

4.4 User Management (Admin Only)

The admin (hello@houzscency.com) manages all users through the ERP admin panel:

Action	Description
Add User	Create new account with email, assign department and role
Edit User	Change role, department, or specific permissions
Disable User	Temporarily disable access (does not delete data)
Remove User	Permanently remove account (audit log preserved)
Reset Password	Send password reset link to user email
View Audit Log	See all actions taken by any user (who changed what, when)

5. System Overview

5.1 Event Types

- **SOLO:** Standalone mall booth events (single brand, single venue)
- **EXHIBITION:** Expo/convention events (may involve multiple brands at one venue)

5.2 Brands Managed

AKEMI, ZANOTTI, ERGOTEX, DUNLOPILLO

5.3 Geographic Coverage (13 Locations)

KL, Johor, Penang, Sabah, Sarawak, Melaka, Kedah, Terengganu, Putrajaya, N.Sembilan, Kuantan, Ipoh, Seremban

6. Technical Architecture

6.1 Tech Stack

Layer	Technology	Purpose
Frontend	Next.js (React)	PWA with responsive UI
Backend	Node.js (Express)	API gateway & business logic
Database	PostgreSQL	Primary data store (single source of truth)
Cache	Redis	Session management & real-time updates
File Storage	Cloud Storage (GCS/S3)	Image uploads, PDF storage, permits
OCR	Tesseract.js / Google Vision	PDF invoice text extraction
Auth	NextAuth.js	Role-based authentication
Calendar Engine	Custom (React + PostgreSQL)	Built-in Notion-style calendar

No Google Sheets API, Google Calendar API, or Notion API required in production.

6.2 PWA Features

- Service Worker for offline capability and background sync
- Web App Manifest for installability on Android, iOS, and desktop
- Camera API for direct image uploads from mobile
- Responsive: Mobile (<768px), Tablet (768-1024px), Desktop (>1024px)
- No voice input - all text entry via keyboard/typing only

6.3 Data Flow

All data lives in PostgreSQL. No external API calls needed for daily operations.

- User action in ERP Frontend -> Backend API -> PostgreSQL (master database)
- File uploads -> Cloud Storage -> reference stored in PostgreSQL
- PDF uploads -> Cloud Storage -> OCR extraction -> cost data stored in PostgreSQL

7. Data Model

7.1 Events Table (from Google Sheets Dashboard)

Column	Type	Notes
id	UUID	Primary key
year	Integer	Event year
month	Text	Event month
start_date	Date	Event start
end_date	Date	Event end
days	Integer	Auto-calculated
organizer	Text	Event organizer
state	Text	Malaysian state
event_venue	Text	Venue name
brand	Enum	AKEMI/ZANOTTI/ERGOTEX/ DUNLOPILLO
event_type	Enum	SOLO/EXHIBITION
booth_no	Text	Booth number
size_sqm	Decimal	Booth size
sales_rm	Decimal	Sales amount
cogs_rm	Decimal	Cost of goods sold
gp_rm	Decimal	Auto: sales - cogs
gp_pct	Decimal	Auto: gp / sales
rental_rm	Decimal	Rental cost
rental_pct	Decimal	Auto: rental / sales
setup_cost_rm	Decimal	Setup cost
net_profit_rm	Decimal	Auto: gp - rental - setup
status	Enum	Confirmed/Pending/Cancelled/ Completed

7.2 Preparation Table (from Notion Preparation DB)

Column	Type	Notes
id	UUID	Primary key
event_id	FK -> Events	Links to event
brand	Enum	Event brand
status	Enum	Pending Agreement / In Progress / Done
bd_pic_id	FK -> Users	Assigned BD person
sales_pic_id	FK -> Users	Assigned sales person
management_id	FK -> Users	Wei Siang
payment_status	Enum	Not started / Security Deposit / Done Payment
rental_file	Text (URL)	Uploaded rental proof image
days	Integer	Duration
bd_workflow_status	JSON	All 12 workflow button states

7.3 Projects Table (from Notion Project DB)

Column	Type	Notes
id	UUID	Primary key
event_id	FK -> Events	Links to event
preparation_id	FK -> Preparation	Links to preparation
preparation_condition	Enum	Done Prepared / Pending
setup_driver	Text	Driver name
setup_dismantle_date	Timestamp	Exact date + time
setup_dismantle_status	Enum	Pending / In Progress / Done
setup_dismantle_condition	Enum	Done Dismantle / In Progress

setup_iori	Text	Truck assignment
permit_file	Text (URL)	Permit document URL
expo_map	Text (URL)	Exhibition floor map URL
stock_in_transfer	Boolean	Stock returned confirmed

7.4 Additional Tables

- **Users:** id, email, name, department, role, created_by, is_active
- **BD_Records:** id, preparation_id, document_name, file_url, cost, remark
- **Defect_List:** id, project_id, status, name, photos (JSON array), remarks, date, reported_by
- **Stock_Transfer:** id, project_id, type (IN/OUT), preparation_condition, confirmed
- **Remarks:** id, parent_type, parent_id, section, text, created_by, created_at
- **File_Uploads:** id, parent_type, parent_id, section, file_url, file_type, uploaded_by
- **Audit_Log:** id, user_id, action, table_name, record_id, changes (JSON), timestamp

8. Notion-Style Calendar Specification

The built-in calendar replaces Google Calendar entirely. It is designed to look and feel like a Notion calendar database view.

8.1 Monthly Grid View (Default)

- Clean monthly grid with 7 columns (Mon-Sun)
- Each date cell shows: number of events + brief event labels
- No color coding by organizer - all events use the same clean card style
- Current date highlighted
- Navigate: Previous/Next month arrows, "Today" button, month/year picker
- Events that span multiple days show as horizontal bars across date cells

8.2 Click-to-Expand Behavior

Clicking any date cell opens an expanded side panel or modal showing ALL events for that date:

- Event cards listed vertically with key info (Name, Brand, Venue, Status)
- Each card is clickable to open the full event detail page
- Full event detail page contains all toggle sections (3D/Floor Plan, Setup & Dismantle, Sales Report, etc.)
- From the event detail page, authorized users can edit, upload files, and add remarks

8.3 Event Detail Page (Full View)

When an event card is clicked from the calendar or dashboard, the full event detail page opens with these sections:

Section	Content	Who Can Edit
Event Info	All dashboard columns (dates, venue, brand, etc.)	BD only
BD Workflow	12 status buttons + notes	BD + Management (approve only)
Pre Project Documentation	PDF upload + auto-extracted cost + remark	BD only
Payment Status	Start Payment / Done Payment buttons	BD only
Amend After Confirmation	Remarks section for post-confirmation changes	BD + Sales PIC (own events)
3D / Floor Plan	Image upload section	BD only
Setup & Dismantle	Image upload + remarks	Sales PIC (own) + PNG Team + Driver (own)
Sales Report	Image upload + remarks	Sales PIC (own events only)
Stock Transfer	Stock Out / Stock In records + checkbox	Purchasing KL only
Defect List	Photos + remarks for damaged items	Purchasing KL + Driver (own)
Permit	File upload + download	BD (upload) / Driver + Logistics (download)

8.4 Secondary Calendar Views

- **Weekly View:** 7-day grid with hourly time slots for setup/dismantle scheduling
- **Daily View:** Detailed timeline for a single day
- **List View:** Simple chronological list of upcoming events (next 30 days)

9. Department Portal Architecture

The ERP contains 6 department portals. Each portal shows filtered views relevant to that department.

9.1 Portal Overview

Portal	Department	Primary User(s)
Sales Department	Sales	Sales Leaders (PETER, KINGSLEY) + Sales PICs
BD Department	BD	hello@houzscency.com (Admin + Coordinator)
Operation Department	Operation	Purchasing KL, Logistics KL, PNG Team
Management Department	Management	Wei Siang
Driver Portal	Driver	Setup/dismantle drivers
Data Table	Data	Aggregated data view

9.2 Sales Department

ACCESS: Each Sales Leader sees ONLY their assigned events.

Section	Views	Key Columns
Preparation Stage	To-do, Calendar	Status, Name
Project To-do Task	Pending Assign, To-do, On-Going, Pending Check, Calendar	Sales PIC, Date, Name, Preparation Condition, Setup-Dismantle Date, Permit File
Project Overview	Ongoing, Calendar	Preparation Condition, Setup & Dismantle Condition, Name, Sales PIC

9.3 BD Department

ACCESS: hello@houzscency.com has FULL ACCESS to ALL events.

- Full event CRUD (create, read, update, archive)
- BD Workflow with 12 status buttons
- Pre Project Documentation (PDF upload + OCR cost extraction + remark)
- Payment tracking (Start Payment / Done Payment / Security Deposit)
- Quotation/Agreement workflow (3 scenarios)

9.4 Operation Department (3 Sub-Portals)

9.4.1 Purchasing (KL Team)

Section	Columns	Editable
Stock Out Transfer Record	Preparation Condition, Name	Yes - full CRUD
Stock In Transfer Record	Preparation Condition, Name, Checkbox	Yes - full CRUD
Defect List	Status, Name, Photos, Remarks, Date	Yes - full CRUD

9.4.2 Logistics (KL Team)

Section	Columns	Editable
Preparation Stage	Preparation Condition, Name, Permit File, Date, Setup-Dismantle Date (exact times)	View only + Permit download

9.4.3 PNG Team

Section	Columns	Editable
Preparation Stage	Standard preparation columns	View only
Setup & Dismantle	Setup/dismantle columns + photos + remarks	Yes - upload + remarks
Project Overview	Project overview columns	View only

9.5 Management (Wei Siang)

ACCESS: Full oversight of ALL events with financial visibility.

Section	Views	Unique Columns
Preparation Record	Ongoing Task, Ongoing Project, Calendar	Days (sum), Rental (file), Venue, BD PIC
Project Record	Ongoing Project, Calendar	Permit File, Setup & Dismantle Condition, Sales PIC

9.6 Driver Portal

Section	Purpose	Actions
Setup & Dismantle	View schedule, upload progress photos, type remarks	Upload images + type remarks
Defect	Report damaged items with photos and descriptions	Upload defect photos + type remarks
Permit Download	Download event permits for venue entry	One-tap download

10. Access Control & Edit Permissions

10.1 Role-Based Access Matrix

Data Area	BD (Admin)	Sales Leader	Management	Purchasing	Logistics	PNG	Driver
Create event	FULL	-	-	-	-	-	-
Edit event details	FULL	-	-	-	-	-	-
Edit financial data	FULL	-	VIEW	-	-	-	-
BD Workflow buttons	FULL	-	APPROVE	-	-	-	-
Upload agreement PDF	FULL	-	VIEW	-	-	-	-
Payment buttons	FULL	-	VIEW	-	-	-	-
Pre Project Docs	FULL	-	VIEW	-	-	-	-
Assign Sales PIC	FULL	-	-	-	-	-	-
Setup remarks/photos	-	OWN	-	-	-	EDIT	OWN
Sales Report	-	OWN	-	-	-	-	-
3D / Floor Plan	FULL	VIEW	-	-	-	-	-
Amend remarks	FULL	OWN	VIEW	-	-	-	-
Stock In/Out	-	-	-	FULL	-	-	-
Defect List	-	-	-	FULL	-	-	OWN
Permit upload	FULL	-	-	-	-	-	-
Permit download	-	-	-	-	YES	-	YES
Calendar (add/edit)	FULL	-	-	-	-	-	-
Calendar (view)	ALL	OWN	ALL	ALL	ALL	ALL	OWN
User management	FULL	-	-	-	-	-	-
Audit log	FULL	-	-	-	-	-	-

Permission Legend:

- FULL = Create, Read, Update, Delete
- OWN = Can only edit records assigned to them (filtered by Sales PIC or Driver)
- APPROVE = Can only click approve/reject buttons
- VIEW = Read-only access
- YES = Specific action allowed (e.g., download)
- ALL = Can view all events / OWN = Can view only assigned events
- - = No access

10.2 Data Isolation Rules

- Sales PIC filtering: Each Sales Leader sees ONLY their assigned events
- BD full access: hello@houzscenury.com sees everything, edits everything
- Financial data: Only BD and Management can view cost/rental/profit figures
- Driver isolation: Drivers see only events they are assigned to
- Audit trail: Every edit is logged with user, timestamp, and change details

11. Image Upload & Remarks Zones

All remarks are *TEXT INPUT ONLY* (typing). No voice-to-text. File uploads support: Images (JPG, PNG), PDF, Excel (XLSX).

11.1 Image/File Upload Zones (9 Total)

#	Zone	Location	File Types
1	Rental Proof	Preparation - Rental field	Image
2	3D / Floor Plan	Event Detail - Toggle section	Image
3	Setup & Dismantle Photos	Event Detail - Toggle section	Image
4	Sales Report Images	Event Detail - Toggle section	Image
5	Pre Project Documentation	BD Record - Files & media	PDF, Excel, Image
6	Defect Photos (Purchasing)	Defect List - Files column	Image
7	Defect Photos (Driver)	Driver Portal - Defect section	Image
8	Permit Files	Event Detail - Permit field	PDF, Image
9	Expo Map	Event Detail - Expo Map field	Image, PDF

11.2 Remarks Zones (9 Total - Text Input Only)

#	Zone	Location	Input Method
1	Amend after confirmation	Event Detail - Toggle section	Typing only
2	Setup & Dismantle Remarks	Event Detail - Toggle section	Typing only
3	Sales Report Remarks	Event Detail - Toggle section	Typing only
4	BD Notes	Preparation Entry - Notes section	Typing only
5	Pre Project Remark	BD Record - Remark column	Typing only
6	Defect Remarks (Purchasing)	Defect List - Remarks column	Typing only
7	Defect Remarks (Driver)	Driver Portal - Defect section	Typing only
8	Quotation/Agreement Notes	BD Workflow sections	Typing only
9	Payment Notes	BD Workflow - Payment section	Typing only

12. Mobile-First Design

12.1 PWA Requirements

- Installable on Android and iOS via "Add to Home Screen"
- Offline mode for viewing cached data
- Push notifications for status changes and assignments
- Background sync for uploads when connectivity restored

12.2 Camera Integration

- Direct camera access via HTML5 getUserMedia API
- Photo compression before upload (max 2MB)
- Multiple photo upload support
- Supported formats: JPG, PNG

12.3 Input Methods

- ALL text input via keyboard/typing only (no voice-to-text)
- File uploads: Image (JPG, PNG), PDF, Excel (XLSX)
- Date pickers for date fields
- Dropdown selects for predefined options (Brand, State, Event Type)
- Toggle buttons for quick filters

12.4 Responsive Breakpoints

Device	Width	Priority Features
Mobile	< 768px	Camera upload, Quick actions, Permit download, Calendar view
Tablet	768-1024px	Split views, Calendar + Detail side-by-side
Desktop	> 1024px	Full dashboard, Multi-panel, Calendar + Table toggle

13. Implementation Roadmap

Phase 1: Foundation (Months 1-3)

- Core PWA shell with authentication (hello@houzscentury.com as admin)
- PostgreSQL database setup with all tables
- Dashboard front page with data table and filter bar
- Built-in Notion-style calendar (monthly view)
- Basic event CRUD (create, read, update, archive)
- Role-based login for 6 department portals
- Mobile camera upload for images
- Data migration from Google Sheets (all 1,084+ rows)

Phase 2: Full Features (Months 4-6)

- BD Workflow engine with 12 status buttons
- Pre Project Documentation with PDF upload + OCR cost extraction
- Payment tracking (Start Payment / Done Payment / Security Deposit)
- All 9 image upload zones + 9 remarks zones
- Event detail page with all toggle sections
- Stock In/Out transfer records (Purchasing)
- Defect list with photo upload (Purchasing + Driver)
- Push notifications for status changes
- Data migration from Notion (all databases and portals)

Phase 3: Polish & Go-Live (Months 7-9)

- Offline mode with background sync
- Advanced calendar views (weekly, daily, list)
- Drag-and-drop event rescheduling in calendar
- Audit log and admin panel
- Contractor view (filtered, view-only, no financials)
- Performance optimization
- User training and onboarding
- FULL GO-LIVE: Retire Google Sheets, Calendar, and Notion

Appendix A: Database Relationship Map

- Events (master) <- Preparation (1:1 via event_id)
- Events (master) <- Projects (1:1 via event_id)
- Preparation <- BD_Records (1:many via preparation_id)
- Projects <- Defect_List (1:many via project_id)
- Projects <- Stock_Transfer (1:many via project_id)
- All tables <- Remarks (polymorphic via parent_type + parent_id)
- All tables <- File_Uploads (polymorphic via parent_type + parent_id)
- All tables <- Audit_Log (via table_name + record_id)
- Users -> Preparation (bd_pic_id, sales_pic_id, management_id)
- Users -> Audit_Log (user_id)

Appendix B: Data Migration Plan

All existing data will be migrated into the ERP database before go-live:

Source	Data	Target Table	Records
Google Sheets - Dashboard	All event records with financials	Events	1,084+ rows
Google Sheets - Event Schedule	Event scheduling data	Events (merged)	Same rows
Google Calendar	All calendar events	Events (date validation)	All events
Notion - Preparation DB	14 properties per entry	Preparation	All entries
Notion - Project DB	22 properties per entry	Projects	All entries
Notion - BD Records	Pre project documentation	BD_Records	All records
Notion - Defect List	Defect items with photos	Defect_List	All items
Notion - File uploads	All uploaded images/files	File_Uploads + Cloud Storage	All files
Notion - User assignments	BD PIC, Sales PIC mappings	Users + FK references	All users

After successful migration and verification, Google Sheets, Google Calendar, and Notion will be retired from active use.
